

SIMULATION · PRAHARI-SIM, protocol R4 · H-none seeds 6001-6050 (50) · H-mix- $\times 0.3$ seeds 6001-6050 (50) · H-mix seeds 6001-6050 (50) · H-mix- $\times 3$ seeds 6001-6050 (50)
 30 simulated test days per seed after 28 d calibration and tuning · $\times 0.3$ and $\times 3$ use H-mix's settings, $\times 0$ H-none's
 Equal false alarms: 0 = 1 a month not reachable; at $\times 3$ the deployment settings exceed 1 false incident a month
 Useful floor: the selected setting detecting $\geq 50\%$ on the selection seeds
